

1) What error message did you encounter (if any)?

I did not encounter any error message, but the program repeatedly outputted the error message "Error! Please enter a valid INTEGER between 1 and 999: " when I entered invalid text.

2) What unexpected behavior did your program exhibit?

The program got stuck in an infinite loop that would ultimately crash my Eclipse.

3) What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

The issue was caused by a handling error. The invalid input remained because I forgot to add the `userinput.next();` statement in order to allow the user to input another value.

4) How did you fix the issue?

I added `userinput.next();` to remove the invalid input and stop the infinite loop

5) Provide the corrected code or solution using a screenshot.

```
else
{
    //error message if the user did not input an integer
    System.out.print(red+"Error! Please enter an INTEGER between 1 and 999: "+reset);
    userInput.next();

    continue;
}
```
