

1) What error message did you encounter (if any)?

I did not encounter any error message, but the program displayed the final mark without allowing the user to enter their grade percentage

2) What unexpected behavior did your program exhibit?

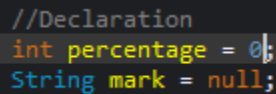

The program would display BG1, without giving the user a chance to enter their own mark

A screenshot of a terminal window with a dark background. The text is as follows:

```
This program displays your mark based on what percentage you got on an assignment or test.  
Enter your grade percentage (rounded to the nearest whole number):  
Your mark is: BG1
```

3) What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

The issue was caused by an initialization error. I had originally initialized the percentage variable to be 0, so the program continued as if the user input was 0

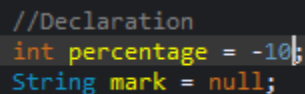

A screenshot of a code editor showing the following C# code:

```
//Declaration  
int percentage = 0;  
String mark = null;
```

4) How did you fix the issue?

I changed the initialization to make percentage = -10, which was outside the valid range so the program performed as intended.

5) Provide the corrected code or solution using a screenshot.

A screenshot of a code editor showing the corrected C# code:

```
//Declaration  
int percentage = -10;  
String mark = null;
```
